Appendix B: Traffic Counts

Appendix C: Travel Time Survey Results

1. INTRODUCTION

Traffic Data and Control (TDC) has been commissioned by the Eurobodalla Shire Council to conduct traffic surveys at Batemans Bay in March 2010. The traffic survey will help to identify the future traffic infrastructure needs of Batemans Bay as a consequence of proposed development around the CBD. This report contains the survey results.

The surveys involved three components:

- collect origin-destination data at four CBD fringe locations (inbound and outbound);
- undertake traffic counts at fourteen sites within the CBD; and
- collect travel time data along Beach Road, Vesper Street / Princes Highway and the Old Princes Highway.

Previous Metro Count Data available indicated that traffic peaks occurred in the following time periods:

- AM/Lunch Peak: 11.00 AM – 1:00 PM; and
- PM Peak: 3.00 PM – 5.00 PM.

The surveys were all undertaken on the 18th of March, 2010, within these particular time periods.

2. ORIGIN-DESTINATION SURVEY

The origin-destination data was collected to determine the extent of “through traffic” usage throughout the study area and to subsequently allow for a trip distribution matrix to be prepared. Survey staff collected partial number plates of every vehicle travelling in each direction using a voice recording device at eight locations, as follows;

- Site A: Princes Highway Northbound (at Vesper St / Clyde St / Princes St intersection);
- Site B: Princes Highway Southbound (at Vesper St / Clyde St / Princes St intersection);
- Site C: Cranbrook Road Eastbound (immediately west of Cranbrook Rd / Princes H’way Intersection);
- Site D: Cranbrook Road Westbound (immediately west of Cranbrook Rd / Princes Hwy Intersection);
- Site E: Princes Highway Northbound (immediately south of Cranbrook Rd / Princes Hwy Intersection);
- Site F: Princes Highway Southbound (immediately south of Cranbrook Rd / Princes Hwy Intersection);
- Site G: Beach Road Northbound (adjacent to Catalina Country Club), and;
- Site H: Beach Road Southbound (adjacent to Catalina Country Club).

Each of these locations are displayed in Figure 1.

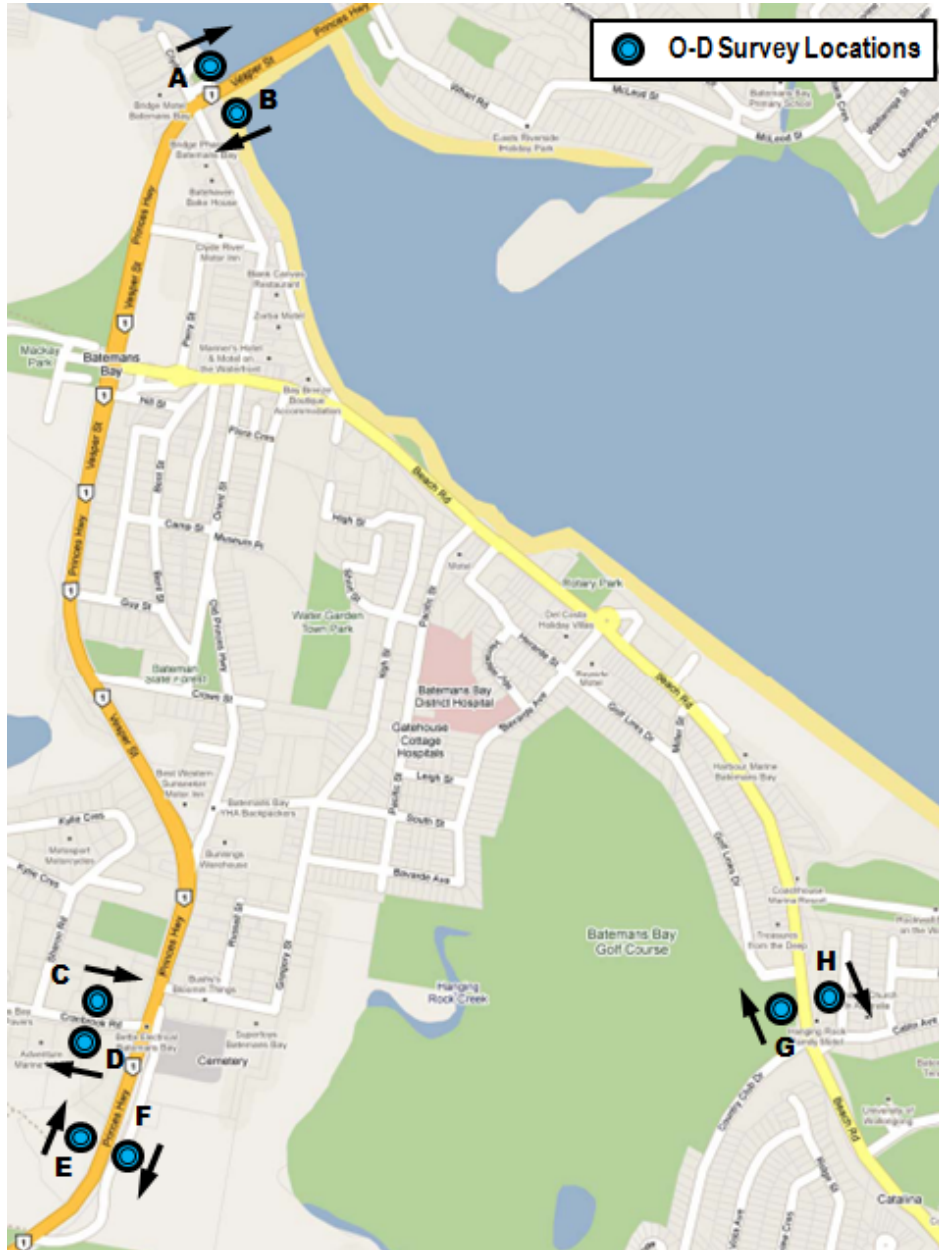

Figure 1: O-D Survey Locations

By matching the number plates of vehicles travelling past each site, it was possible to determine the volume of traffic passing between various combinations of sites.

The final results are shown in Appendix A.

3. TRAFFIC COUNTS

Traffic counts were collected at fourteen locations, as shown in Figure 2. The counts were obtained for both the AM and PM peaks periods identified in Section 1.

Appendix B contains the associated table for each count location for each period.

Figure 2: Traffic Count Locations

4. TRAVEL TIME SURVEY

Travel time surveys were conducted for three north-south corridors through Batemans Bay, namely:

- Corridor A: Beach Road;
- Corridor B: the Old Princes Highway; and
- Corridor C: Vesper Street / Princes Highway.

These corridors are displayed in Figure 3. Each corridor was driven in both the northbound and southbound directions, and the data was collected using a GPS unit which reads the vehicle position at every one second.

Each corridor was driven several times in the both the AM and PM peaks, resulting in a robust and reliable set of results for each peak period. The overall results are shown in Appendix C.
