SUMMARY

This document provides the Development Servicing Plans (DSPs) for the development areas within the Eurobodalla Shire Council Local Government Area.

The DSPs have been prepared in accordance with section 306 (3) of the *Water Management Act, 2000*. In preparing the DSPs, Council has considered the 2016 *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* issued by the Minister for Lands and Water, pursuant to that Act.

The areas covered by these DSPs are shown on the plans in Appendix 1.

The timing and expenditure for works serving the areas covered by these DSPs are shown in the DSP background information (Appendix 2). Future capital works expenditure included in Council's Total Asset Management Plan (TAMP) have been applied to the DSPs including water supply security improvements and wastewater treatment plant upgrades. The TAMP was developed as part of the update of the Integrated Water Cycle Management Strategy and Strategic Business Plan in 2016 and is updated annually by ESC.

System design and operation in the DSP areas are based on ESC's levels of service (refer Section 4) including:

- Water supply flow, pressure, quantity, restrictions during drought conditions, notification of supply interruptions, infrastructure failures and water quality; and
- Sewerage availability of service, notification of supply interruptions, infrastructure failures, complaints and effluent quality.

The proposed water supply and sewerage developer charges for the areas covered by these DSPs are given in Table 1.

Table 1: Proposed developer charges (2020\$)

DSP Area	Service Area	Developer Charge (per ET)	Cross-Subsidy (resulting increase in the Typical Residential Bill p.a.)
Water DSP	All water supply areas	\$6,688	-
Sewer DSP 1	Tomakin, Rosedale/Guerilla Bay, Bodalla	\$11,065	\$31
Sewer DSP 2	Moruya, Batemans Bay	\$8,445	
Sewer DSP 3	Narooma, Tuross	\$4,283	

Developer charges relating to this DSP document will be reviewed after a period of 5 to 10 years to align with the review cycle for Council's Integrated Water Cycle Management Strategy and Strategic Business Plan.

In the period between any review, developer charges will be adjusted on 1 July annually (using the 12 month CPI for Sydney to 31st March), excluding the impact of GST.

Developers are responsible for the full cost of the design and construction of water supply and sewerage reticulation works within subdivisions.

Background information containing all the critical data including calculation models behind each DSP is available on request.

1. INTRODUCTION

Section 64 of the *Local Government Act, 1993* enables a local government authority to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to section 306 of the *Water Management Act, 2000*.

A Development Servicing Plan (DSP) details the water supply and sewerage developer charges to be levied on development areas utilising a water utility's water supply and/or sewerage infrastructure.

This document provides the developer charges for water supply and sewerage for the development areas serviced by Eurobodalla Shire Council (ESC).

This DSP document has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to section 306 (3) of the *Water Management Act, 2000*.

This DSP document supersedes any other requirements related to water supply and sewerage developer charges for the areas covered by these DSPs. This document takes precedence over any of Council's codes or policies where there are any inconsistencies relating to water supply or sewerage developer charges.

2. ADMINISTRATION

2.1 DSP Areas

The areas covered by these DSPs are shown on the maps in Appendix 1.

- Water supply service area – All areas currently serviced by the regional water supply.
- Sewerage service areas – Batemans Bay, Rosedale and Guerilla Bay, Tomakin, Moruya, Tuross, Bodalla/Potato Point, Narooma and Nelligen.

These DSPs apply to development of all land in the Eurobodalla Shire that is within the water supply and/or sewerage service areas (refer plans in Appendix 1). The DSP area boundaries are defined by the existing regional water supply service area and/or the sewerage system catchments (refer Section 6).

The DSPs also apply to connection of land with existing residences and/or non-residential buildings if water or sewerage developer charges have not been paid previously.

Any development outside the water supply and sewerage service areas will require a special agreement with ESC.

For the new sewerage areas of Rosedale/Guerilla Bay and Bodalla/Potato Point and water supply and sewerage areas of Nelligen, only new developments are required to pay developer charges.

2.2 Application of Developer Charges

ESC will assess the demand for service in terms of equivalent tenements (ET) in accordance with Council's 2017 Water and Sewerage Headworks Charges Policy (<https://www.esc.nsw.gov.au/inside-council/council/council-policies/policies/Water-Supply-and-Sewer-Headworks-Charges-Policy.pdf>) and will levy developer charges proportional to the number of ETs. The minimum demand for each development is 1 ET. The developer charges will apply to new development and re-development (i.e. change of use).

2.3 Timing and Payment of Developer Charges

Developer charges will be determined and levied in accordance with the provisions of these DSPs at the time of considering an application for a compliance certificate under section 305 of the *Water Management Act 2000* or a construction certificate under section 109 of the *Environmental Planning and Assessment Act 1979* or at the time of issuing a notice or other form of written advice e.g. under the *SEPP (Exempt and Complying Development Codes) 2008* or approval under section 68 of the *Local Government Act, 1993*. The time limit for payment of developer charges will be included in the notice of determination or will be advised to the developer by a separate notice. The amount of any developer charges not paid within the specified time limit will be reassessed and a subsequent determination of developer charges will be made in accordance with council's then current DSP.

A Subdivision Certificate, Occupancy Certificate, Complying Development Certificate or, where so conditioned the approval of a Section 68 Application, will not be issued until the conditions of the Certificate of Compliance have been fulfilled.

Dispute resolution procedures are discussed in the 2016 *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater*. ESC is not a member of the Electricity and Water Ombudsman.

2.4 Review

Developer charges relating to this DSP document will be reviewed after a period of 5 to 10 years to align with the review cycle for Council's Integrated Water Cycle Management Strategy and Strategic Business Plan. If the review indicates that the developer charges in the DSPs remain valid, the DSPs will apply for a further five years after ESC releases a public notice to this effect. However, if it is considered that new DSPs are warranted, new DSPs shall be prepared, audited, exhibited and registered.

2.5 Indexation

In the period between any review, developer charges will be adjusted on 1 July annually (using the 12 month CPI for Sydney to 31st March), excluding the impact of GST.

2.6 Exemption

Under section 306 (4) and (5) of the *Water Management Act 2000*, the Minister for Planning may make a determination in regard to developer charges levied on Crown development.

Crown developments for essential community services (education, health, community services, and law and order) are exempt from general developer charges. Water utilities may charge these developments only for that portion of the direct connection cost (e.g. for a lead-in main) relating to Crown development.

ESC may also apply other exemptions for developer charges.

2.7 Special Levies

Where Council funds works that would otherwise be provided by the developer, Council may apply a Special Levy for those works.

3. LAND USE PLANNING

3.1 Growth Projections

Historical data and future growth for the water and sewerage service areas are shown in the following table as the number of water supply and sewerage ETs (from Council's 2014 Demand Forecast prepared as part of the development of the IWCM Strategy and Strategic Business Plan). The population served by the water supply and sewerage systems in 2019 was 31,504 and 30,539 people respectively. Data on future population served by the water supply and sewerage systems is not available. These projections are from the present year to 2049, which is Council's current planning horizon. The growth projections for each service area are given in (Appendix 2).

Table 2: Historical and projected future equivalent tenements

Year	Total number of water supply ETs	Total number of sewerage ETs
1996	20,672	15,007
2000	21,940	15,643
2005	23,837	16,818
2010	25,471	18,189
2015	27,926	19,168
2020	29,529	20,462
2025	31,022	21,784
2030	32,326	22,776
2035	33,640	23,806
2040	34,931	24,769
2045	36,099	25,594
2049	37,008	26,229

3.2 Land Use Information

These DSPs should be read in conjunction with the ESC Local Environmental Plan 2012 and Development Control Plans.

4. LEVELS OF SERVICE

ESC system design and operation are based on providing the levels of service (LOS) given in Table 3 and Table 4. The LOS were developed as part of the IWCM Strategy and Strategic Business Plan. Consultation on the proposed LOS was undertaken during the development of the IWCM Strategy and Strategic Business Plan. The LOS applied to ESC's water supply and sewerage systems are the targets that ESC aims to achieve. They are not a customer contract

Table 3: Water supply levels of service

Description	Units	Target Level of Service
System Performance		
Minimum pressure upstream of water meter	m head	20
Maximum static pressure	m head	80
Availability of water for fire fighting	-	Water will be available from fire hydrants for fire-fighting at minimum flow rates determined by guidelines for specific types of development as set out in Local Government Regulations and the conditions established by NSW Fire & Rescue
Consumption Restrictions in Droughts		
Maximum duration of restrictions	Months per 10 year period	6 (i.e. 5% of the time)
Maximum frequency of restrictions	number of times per 10 years	1 (i.e. 10% of years)
Ability to supply demand through the worst drought on record	% of water demand	90 (i.e. a 10% reduction in average consumption).
Interruptions to Supply (per year per supply)		
<i>Planned (95% of time)</i>		
Maximum duration	hours	8
Maximum occurrence	Per year per customer	1
Notice given to domestic customers	days	2
<i>Unplanned</i>		
Maximum duration	hours	6
Maximum occurrence	Per year per customer	1
Maximum interruptions to supply	per 1,000 properties p.a.	100

Description	Units	Target Level of Service
Service Provided		
Time to provide an individual, residential connection to water supply in serviced area	Business days	10
Time to test a customer's water meter	Business days	10
Customer Complaints		
Verbal inquiry response time	Business days	2
Written inquiry response time	Business days	10
Water Quality		
Potable Water Quality		ADWG (2011)

Priority, Issues and Effects	Response Time (time to have staff on-site or to investigate a problem or answer an enquiry)
<i>Priority 1: A complete failure to maintain continuity of supply to multiple customers or critical user at critical time</i>	
Possible Issues: Broken water main, broken service, jammed hydrant, no water, dirty water, leak creating a major issue. Typical Effects: Personal injury or risk to public health, loss of supply, major property damage, failure to maintain quality or quantity of service, large volume of water wasted, significant unplanned depletion of service reservoir, major environmental impact.	1 hour (business hours) 2 hours (after hours)
<i>Priority 2: Failure to maintain continuity of supply to a single customer or critical user at a non-critical time</i>	
Possible Issues: Poor pressure, leaking tapping, stop tap, water main/service, valve or hydrant, minor leak on footpath or roadway, partial failure of connections, faulty or damaged meter. Typical Effects: Minor property damage, minor environmental impact	4 hours (business hours) 4 hours (after hours)
<i>Priority 3: Known fault, non-urgent</i>	
Possible Issues: Service disconnection, faulty hydrant/valve, missing hydrant/valve lid. Typical Effects: Water hammer, need for preventative maintenance, minor customer impact.	Within 5 business days

Table 4: Sewerage levels of service

Description	Units	Target Level of Service
Availability of Service		
Residential Areas	-	All urban residential and industrial areas where practicable.
Frequency of System Failures		
Wet weather sewer overflows	ARI	General: 1 in 5 year CBD and oyster lease areas: 1:20
Customer Complaints		
Verbal inquiry response time	Business days	2
Written inquiry response time	Business days	10
Odours	Events per 1,000 properties per year	<1
Effluent Discharge Compliance		
Compliance with Licence Conditions	%	100

Priority, Issues and Effects	Response Time (time to have staff on-site or to investigate a problem or answer an enquiry)
<i>Priority 1: Major environmental or health incident affecting a large number of customers</i>	
Possible Issue: Blockage overflowing sewer system, manhole overflowing, broken gravity/rising main, pump station failure, missing manhole lid Typical Effects: Personal injury or significant risk to health, surcharge inside/outside a building, property damage e.g. subsidence of critical asset e.g. roadway, buildings, railway, etc., environmental impact e.g. trade waste spill, subsidence causing danger	45 minutes (business hours) 90 minutes (after hours)
<i>Priority 2: Moderate environmental or health incident affecting a small number of customers</i>	
Possible Issue: Cracked sewer pipe, odour complaint, partial sewer blockage, noisy manhole, noisy pump station. Typical Effects: Slow moving toilet flush	45 minutes (business hours) 90 minutes (after hours)
<i>Priority 3: Minor environmental or health incident</i>	
Possible Issue: Minor subsidence, restoration, locations Typical Effects: No impact on the environment, seepage investigation	60 minutes (business hours) 120 minutes (after hours)

5. DEVELOPER CHARGES METHODOLOGY

Developer charges are up-front charges levied to recover part of the infrastructure costs incurred in servicing new developments or additions/changes to existing developments. Developer charges serve two related functions:

- They provide a source of funding for infrastructure required for new urban development; and
- They provide signals regarding the cost of urban development and thus encourage less costly forms and areas of development.

The developer charges calculation is based on the net present value (NPV) approach adopted by the Independent Pricing and Regulatory Tribunal (IPART) for the metropolitan water utilities. The fundamental principle of the NPV approach is that the investment in assets for serving a development area is fully recovered from the development. The investment is recovered through up-front charges (i.e. developer charges) and the present value (PV) of that part of annual bills received from the development in excess of operation, maintenance and administration (OMA) costs.

$$\text{Developer Charge} = \text{Capital Charge (cost of providing the assets)} - \text{Reduction Amount (cost recovered through annual bills).}$$

In setting the developer charges, ESC may consider financial, social and environmental factors to determine a level of developer charges that is balanced, fair and meet Council's objectives.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages. LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure.

The capital charge and reduction amount are discussed further in the following sections. The developer charges process is described fully in the 2016 *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater*.

5.1 Capital Charge

The capital charges were calculated for ESC water supply and sewerage service areas based on the existing and future assets providing the services in these areas. The capital charge is calculated by dividing the present value (PV) of the cost of the assets by the PV of the number of new ETs.

The capital charge represents the efficient capital cost of assets used in providing water related services in a DSP area. This includes the cost of both existing and future assets that will be used to service the DSP area. In addition, because local water utilities provide the upfront funding for constructing these assets, the capital charge also includes a commercial return on this investment.

The capital charge is calculated for each service area. Service areas are:

- An area serviced by a separate sewage treatment plant;
- An area serviced by a separate water supply distribution system;
- Separate small towns or villages; or
- A new development area of over 500 lots.

Where the capital charges for two or more service areas are within 30% of each other, they are agglomerated into a single DSP area.

5.2 Reduction Amount

The reduction amount represents the portion of the cost of assets that ESC expects to recover through its annual bills to the new residents.

Council has adopted the NPV of annual bills method to calculate the reduction amount. This method calculates the reduction amount as the NPV for 30 years of the future net income from annual charges (revenue from annual bills less operation, maintenance and administration costs) for the development areas.

6. INFRASTRUCTURE

6.1 Water Supply

Reticulated water is available in all urban centres within Eurobodalla LGA through the regional water supply. The reticulated water supply will be extended to Nelligen by 2023. Akolele water supply is provided by Bega Valley Shire Council.

ESC plans to extend the regional water supply to South Durras by 2028. Development in this area is not covered by this DSP. Once the water supply system is completed, the DSP will be reviewed to include South Durras.

The existing water supply system and major capital works serving the areas covered by this Water Supply DSP is shown on the Plan in Appendix 1.

6.2 Sewerage

ESC is responsible for the management of six existing sewerage systems servicing the areas of Batemans Bay, Moruya, Tuross, Narooma, Tomakin (including Rosedale/Guerilla Bay) and Bodalla (which will also service Potato Point by 2021). ESC will sewer Nelligen by 2023 (with treatment at Batemans Bay STP).

ESC will divert sewage from the southern catchments of Batemans Bay (Malua Bay and Lilli Pilli, sewer catchments BB40 - BB50 and BB53) to Tomakin STP from 2022.

ESC plans to sewer the remaining backlog villages by 2036. Once the sewerage systems are complete, the DSP will be reviewed to include these villages.

A conceptual diagram of the eight sewerage service areas is given in Figure 1. The existing sewerage systems serving the areas covered by this Sewerage DSP are shown on the Plans in Appendix 1.

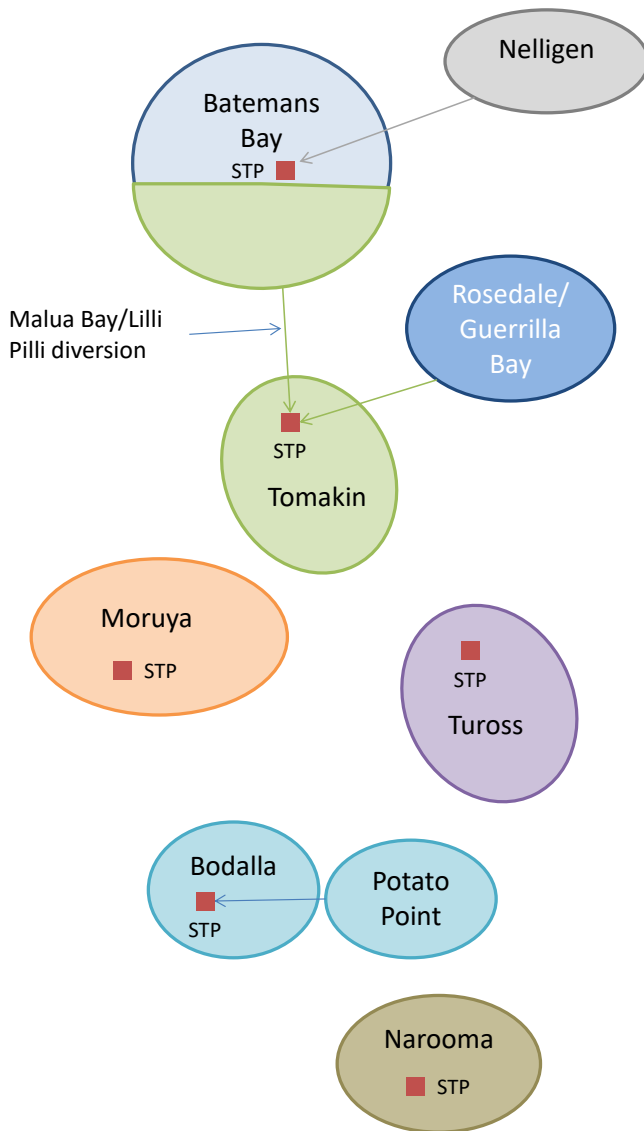

Figure 1: Conceptual diagram of sewerage service areas

6.3 Existing Assets

All existing assets servicing the ESC service areas are included in the capital charge calculations except for the following:

- Assets which will be more than 30 years old at the commencement of the DSPs (i.e. commissioned pre-1990) apart from Deep Creek Dam with value \$52 million constructed 1982. Council has resolved to include the dam as it is an integral component of the water supply system and was originally designed with the capacity to service the proposed future development. This is considered equitable as new development will contribute to the cost of the headworks assets;
- Assets which are unlikely to be fully utilised over the planning horizon for calculating developer charges apart from headworks assets;
- Reticulation assets which are typically paid for directly by developers. Sewerage reticulation assets are assumed to be pipes and fittings ≤ 150 mm. Water supply reticulation is characterised separately in Council's asset register. Reticulation assets funded by Council as part of backlog works are included in the capital charge; and
- Gifted assets which were built by developers and later transferred to Council.

Existing assets have been valued on the basis of Modern Engineering Equivalent Replacement Asset (MEERA) excluding contingencies. Deep Creek Dam was revalued in January 2020 at a MEERA cost of \$52 million (excluding contingency).

The existing assets servicing the area covered by the DSPs are listed in Appendix 2.

6.4 Future Capital Works

The ESC capital works programs are developed and reviewed annually through asset management planning (review of asset capacity, level of service and asset renewal requirements) as part of Council’s Total Asset Management Plan (TAMP) development. Future assets have been valued on the basis of MEERA including contingencies. The TAMP was reviewed as part of the update of the Integrated Water Cycle Management Strategy and Strategic Business Plan in 2016 and is reviewed annually.

The DSPs include 10 years of future capital works where these works will service the growth areas or where existing assets that service the growth areas will require replacement within 10 years (and the original asset has not been included in the calculation). The servicing of development areas has been derived from a review of asset capacity requirements, level of service and asset renewal requirements. Where possible, the construction of new assets servicing a development has been timed to match expected staging of the development.

Similarly, the timing of the replacement of these assets has been estimated from the predicted remaining life and renewal requirements.

The timing and expenditure for water supply capital works serving the areas covered by this DSP are shown in Appendix 2 and summarised in Figure 2.

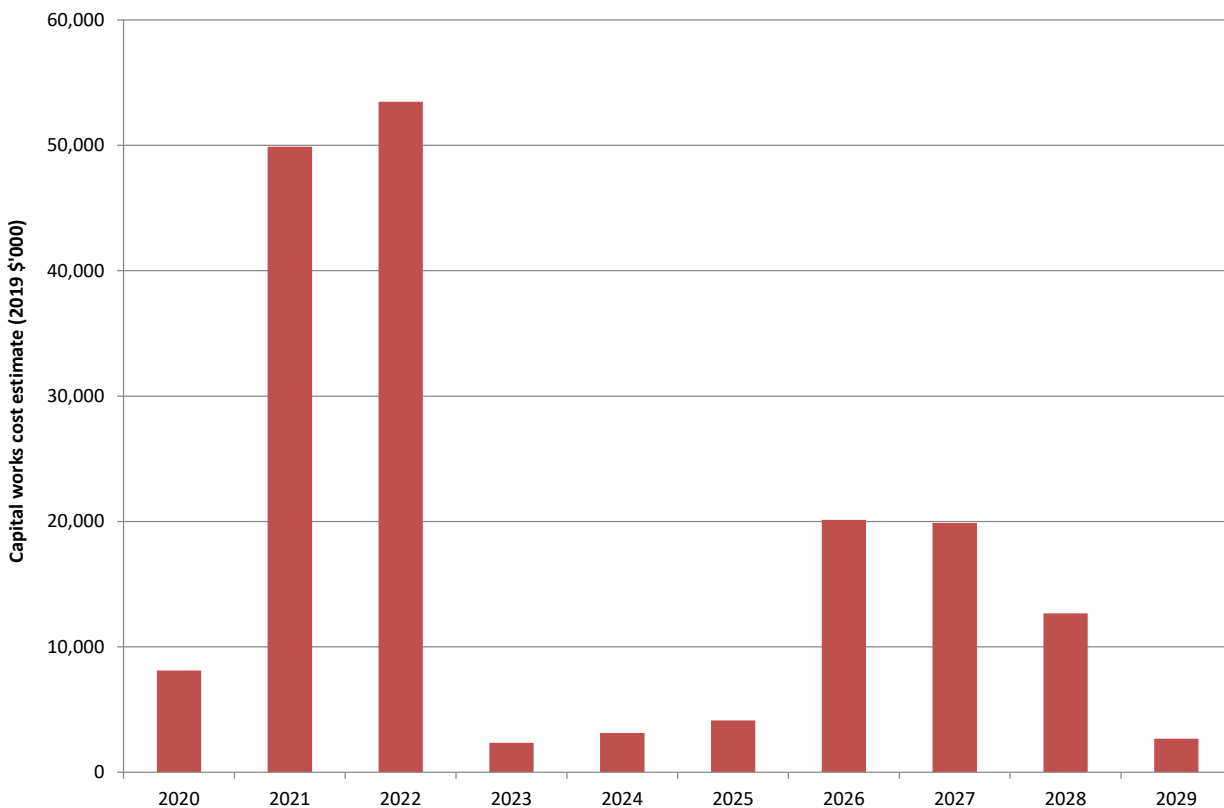

Figure 2: Water supply capital works estimates

The timing and expenditure for sewerage capital works serving the areas covered by this DSP are shown in Appendix 2 and summarised in Figure 3.

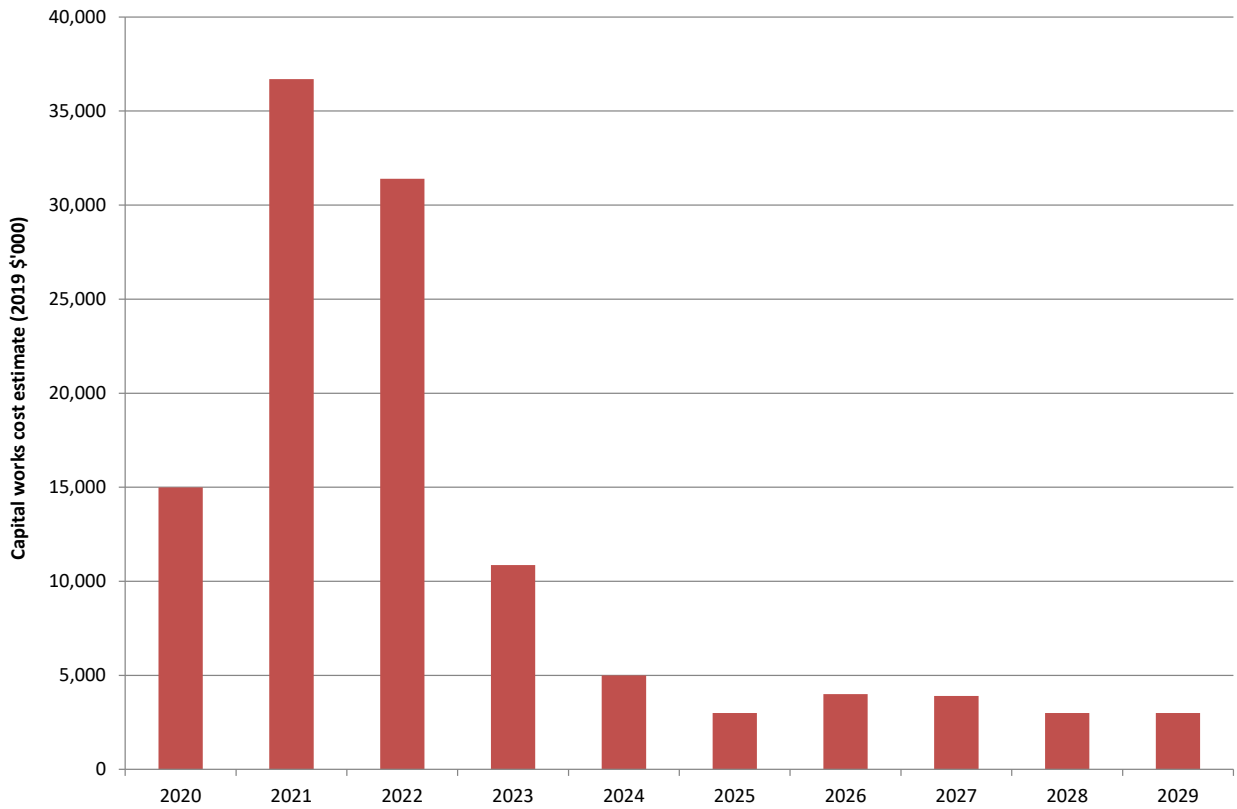

Figure 3: Sewerage capital works estimates

6.5 Reticulation Works

The developer shall be responsible for the full cost of the design and construction of water supply and sewerage reticulation works within developments/subdivisions.

6.6 Design Parameters

Investigation, design and construction of water supply components are based on:

- Council’s levels of service and asset management planning;
- Water Supply Investigation manual (1986); and
- WSAA water supply codes and standards.

Investigation, design and construction of sewerage components are based on:

- Council’s levels of service and asset management planning; and
- WSAA sewerage codes and standards.

7. WATER SUPPLY DEVELOPER CHARGES

The capital charge, reduction amount and developer charge for the water supply areas covered by this DSP are shown in the following tables. The charges are shown in 2019\$.

Table 5: Reduction amount – water supply (2019\$)

Year	Total ETs	New ETs	Net income from new ETs (\$)¹
2019	29,265		
2020	29,529	264	55,224
2021	29,792	264	110,448
2022	30,047	254	163,700
2023	30,301	254	216,953
2024	30,758	457	312,718
2025	31,022	264	368,003
2026	31,286	264	423,287
2027	31,546	260	477,726
2028	31,806	260	532,166
2029	32,066	260	586,605
2030	32,326	260	641,044
2031	32,586	260	695,484
2032	32,852	266	751,155
2033	33,118	266	806,827
2034	33,384	266	862,498
2035	33,640	256	916,138
2036	33,896	256	969,778
2037	34,155	259	1,023,981
2038	34,413	259	1,078,184
2039	34,672	259	1,132,387
2040	34,931	259	1,186,590
2041	35,190	259	1,240,793
2042	35,417	227	1,288,379
2043	35,644	227	1,335,965
2044	35,872	227	1,383,551
2045	36,099	227	1,431,138
2046	36,326	227	1,478,724
2047	36,553	227	1,526,310
2048	36,781	227	1,573,896
2049	37,008	227	1,621,482
Present value		4,289	10,985,105
Reduction amount (\$ per ET)			2,561

1. Calculated from water supply annual bills and operating costs as determined in the 2016 IWCM Strategy and Strategic Business Plan and 2019 charges. The operating cost is not reported separately for each part of the water supply system and is therefore applied to each DSP area. Similarly, a single water supply tariff is applied to the whole shire.

Table 6: Capital charge and developer charge – water supply (2019\$)

DSP Area	Capital Charge (\$ per ET)	Reduction Amount (\$ per ET)	Calculated Maximum Developer Charge (\$ per ET)	Proposed Developer Charge (\$ per ET)
All water supply areas	\$9,118	\$2,561	\$6,557	\$6,557

The proposed water supply developer charge (escalated to 2020\$) is \$6,668 per ET applicable from 1 July 2020.

Capital charge, agglomeration and reduction amount calculations for each service area are shown in Appendix 2.

8. SEWERAGE DEVELOPER CHARGES

The capital charges, reduction amount and developer charges for the sewerage areas covered by this DSP are shown in the following tables. The charges are shown in 2019\$.

The capital charge was originally calculated for each of the following areas (“capital charge areas”, refer Table 24, Appendix 2):

- Batemans Bay;
- Batemans Bay STP (shared by Batemans Bay and Nelligen service areas);
- Tomakin;
- Tomakin STP (shared by Tomakin and Rosedale and Guerilla Bay service areas);
- Rosedale and Guerilla Bay;
- Moruya;
- Tuross;
- Bodalla/Potato Point;
- Narooma;
- Nelligen; and

Present value		3,579	15,281,482
Reduction amount (\$ per ET)			4,270

1. Calculated from sewerage annual bills and operating costs as determined in the 2016 IWCM Strategy and Strategic Business Plan and 2019 charges. The operating cost is not reported separately for each sewerage service area and is therefore applied to each DSP area. Similarly, a single sewerage tariff is applied to the whole shire.

Table 8: Capital charges and developer charges – sewerage (2019\$)

DSP Area	Service Area	Capital Charge (\$ per ET)	Reduction Amount (\$ per ET)	Calculated Maximum Developer Charge (\$ per ET)	Proposed Developer Charge (\$ per ET)	
1-A	Bodalla/Potato Point	\$73,243	\$4,270	\$68,974	\$10,848	
1-B	Nelligen	\$47,497		\$43,227	\$10,848	
1-C	Rosedale and Guerilla Bay	\$23,247		\$15,448	\$15,448	\$10,848
	Tomakin	\$18,655				\$10,848
2-D	Moruya	\$14,746		\$8,279	\$8,279	\$8,279
	Batemans Bay	\$11,971				\$8,279
3-E	Tuross	\$9,310		\$4,199	\$4,199	\$4,199
	Narooma	\$7,986				\$4,199
Weighted Average ¹				\$11,485	\$8,362	

1. Calculated from the predicted growth in each service area

As shown in Table 8, the eight sewerage service areas have been agglomerated (where the capital charge is within 30% of the highest capital charge) to five areas (A-E). These areas were further agglomerated into three DSP areas to cap the developer charges and maintain affordability. The developer charges for areas A, B and C have been set to be equivalent to the current developer charge. For the remaining areas D and E, the developer charge is equivalent to the calculated maximum charge for those areas.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages. LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure.

The cross-subsidy is the difference (%) between the annual bill with the calculated maximum developer charge and the proposed lower developer charge. The cross-subsidy, resulting from capping of developer charges must be disclosed in the DSP, the utility's Annual Report, annual Operational Plan and in communication materials for consultation with stakeholders.

Two cross-subsidy options were developed and examined as follows.

- Option 1: No cross-subsidy – calculated maximum developer charge.
- Option 2: Adopted cross-subsidy - reduced charges for small villages and Tomakin.

The impact of cross-subsidies on the annual sewerage bill for each option is shown in Table 9 and Figure 4. Calculations are shown in Appendix 2.

Table 9: Impact of cross-subsidies on annual bill for sewerage (2019\$)

Option	Required annual sewerage bill per ET	Resulting increase in sewerage bill
1 – no cross-subsidy	\$970	-
2 – adopted cross-subsidy	\$1,001	\$31 (3.2%)

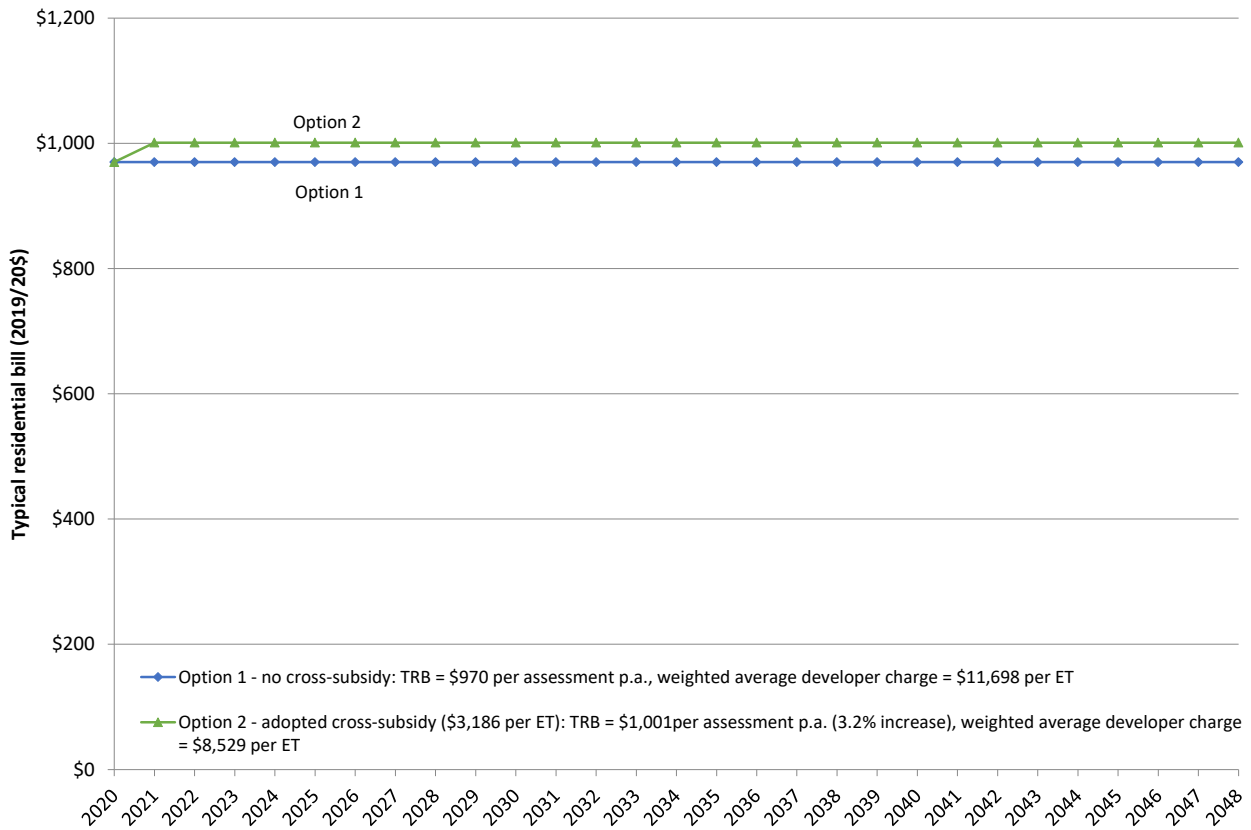

Figure 4: Impact of developer charges options on TRB – sewerage

Council has proposed sewerage developer charges that are lower than the calculated developer charges for some service areas. This means that existing residents will subsidise part of the new development. The cross-subsidy is the difference between the annual bill with the calculated weighted average (maximum) developer charge and the proposed developer charge. The proposed sewerage cross-subsidy results in an average cross-subsidy for developers of \$3,186 per ET (2020\$). This option requires an increase in the medium-term sewerage TRB of \$31 (2020\$) per assessment p.a. (Table 9). However, Council has prepared a financial plan for the sewerage fund which demonstrates that the proposed developer charges are affordable with a lower increase in the TRB (\$5 per assessment p.a.) as shown in Figure 5.

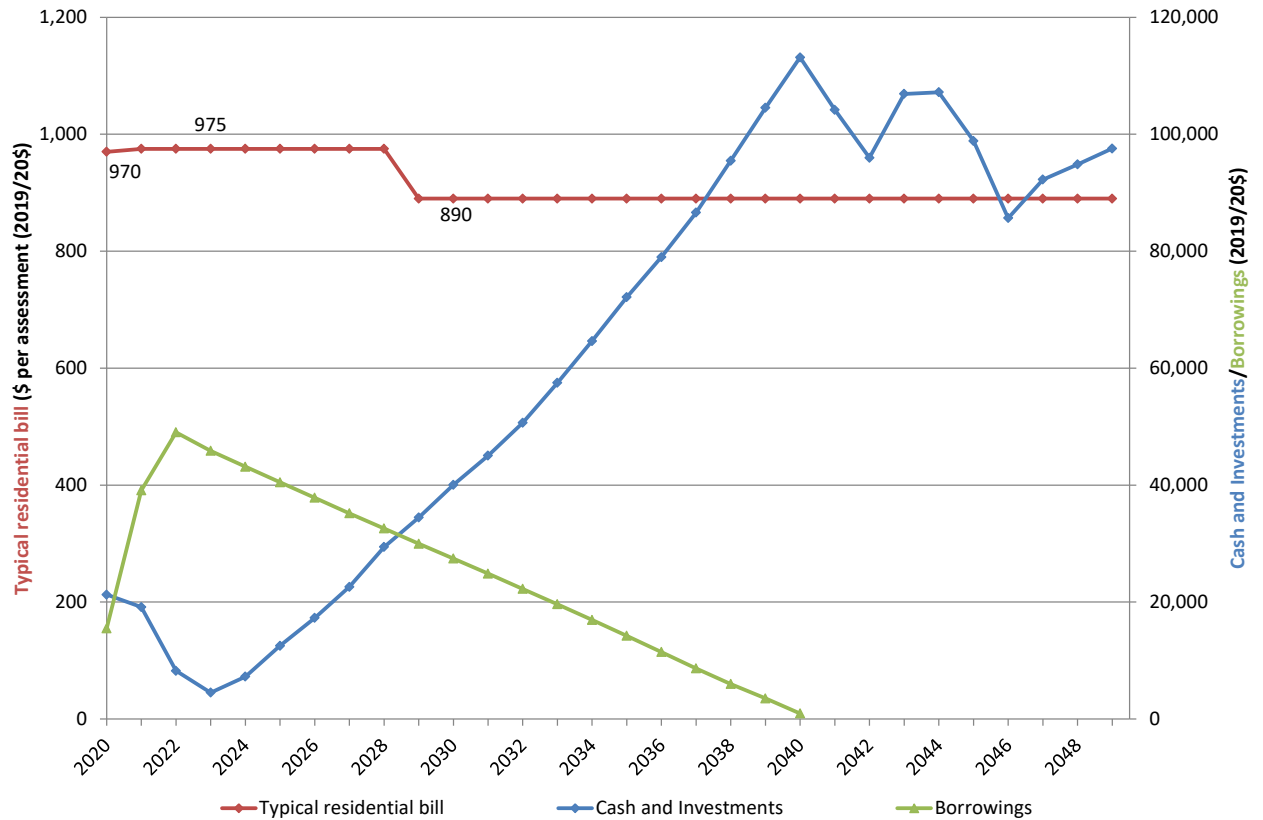

Figure 5: Sewerage TRB, cash and investments and borrowing

The proposed sewerage developer charge (escalated to 2020\$) is \$11,065 per ET for DSP Area 1, \$8,445 per ET for DSP Area 2 and \$4,283 per ET for DSP Area 3 applicable from 1 July 2020.

Capital charge, agglomeration and reduction amount calculations for each service area are shown in Appendix 2.

9. OTHER RELATED CONTRIBUTION PLANS

The following contribution plans may also apply to development within Eurobodalla LGA:

- ESC *Local Infrastructure Contributions Plan, 2012*;
- ESC *Development Contributions Plan 2000-2005*;
- ESC *Section 94 Contributions Plan – Rural Roads*;
- ESC *Section 94A Levy Contributions Plan 2007*; and
- Bega Valley Shire Council *Development Servicing Plan – Water Supply (2013)* for development within Akolele.

Table 14: Capital works program – water supply (2019\$)

Project	DSP area	Details	10 year total	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Water Meter Replacements	Reticulation	Water meters replaced at 10 years, at 5000 kilolitres or when failed.	2600	260	260	260	260	260	260	260	260	260	260
Water Service Renewals	All	Allocation for replacement of water services not replaced when the main is renewed.	600	60	60	60	60	60	60	60	60	60	60
Valve and Hydrant Replacements	All	Valves and hydrants have a design life of approx. half the design life of the water main. Allocation for replacement of valves and hydrants at mid-life of the water main.	1900	190	190	190	190	190	190	190	190	190	190
Water Main Renewals	All	Allocation for replacement of water mains at approx. 1.0% of the network annually from 17/18. Increase to 1.25% circa 2040 with an additional construction crew based at Batemans Bay.	15000	1500	1500	1500	1500	1500	1500	1500	1500	1500	1500
Water Pumping Stations Renewals	All	Minor asset renewals at water pumping stations, including pump refurbishments and replacements.	800	80	80	80	80	80	80	80	80	80	80
Water Reservoir Renewals	All	Refurbishment or replacement of reservoirs, including roof replacements. (Roof 40yrs design life).	2100								1500	300	300
Water Treatment Renewals	All	Refurbishment and replacement of water treatment plant components, excluding scheduled augmentations.	1500					250	250	250	250	250	250
SCADA & Telemetry Renewals	All	Replacement of telemetry and SCADA system components. 2019/20 Tuross Radios \$19K, 2020/21 Moruya Radios \$38K.	500	50	50	50	50	50	50	50	50	50	50
New Service Connections	Reticulation	New 20mm & 25mm water service connections (others by PWO). Budget based on 150 new services and 50 meter only connections per annum.	1400	140	140	140	140	140	140	140	140	140	140
Southern Storage	All	New 3000 ML dam near Bodalla, including river pumping station and transfer mains.	100000	5000	45000	50000							
Southern Water Treatment Plant	All	New 25 ML/day water treatment plant at the new dam site, including decommissioning the existing plant. 70% asset renewal/operational flexibility, 30% growth.	43000					1000	2000	15000	15000	10000	

Water Supply and Sewerage DSP

Project	DSP area	Details	10 year total	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Catalina Service Reservoir	All	New 5ML reservoir to provide additional capacity to accommodate Nelligen and South Durras and growth in the Catalina and Batemans Bay catchments. Including refurbishing the existing Catalina Reservoir and decommission the Bay Depot reservoir.	5000	1000						3000	1000		
Narooma Service Reservoir	All		0										
Distribution System Upgrades	All	New distribution mains required to accommodate growth - identified in IWCMS.	750								250	250	250
Northern Water Treatment Plant Augmentation	All	Scheduled 25yr mechanical and electrical upgrade. Increase the plant capacity from 20-30 ML/day and increase sludge handling capacity.	0										
Water Treatment Sludge Management	All		400		400								
Pressure Reduction	All		400			200	200						
Nelligen	All	Estimate based on Nelligen Water Supply and Sewerage Strategic Options Report (PWD November 2016). Updated Nov 2019	4,510	240	2,600	1,400	270

The calculated developer charge is the maximum developer charge that can be applied for each service area.

The weighted average developer charge was calculated from the present value of new ETs in each service area (from Table 24).

Table 27: Cross-subsidy – sewerage (2020\$)

As Council will levy developer charges that are lower than those calculated (Table 26), the weighted average developer charge is reduced as follows:

Calculated maximum weighted average developer charge = \$11,715 per ET (indexed to 2020\$)

Proposed weighted average developer charge (after cross-subsidy) = \$8,529 per ET (indexed to 2020\$)

Developer charge cross-subsidy = \$3,186 per ET (202\$)

The cross-subsidy calculation is shown in the following table.

Weighted average developer charge cross-subsidy								\$3,186		
Annual sewerage bill - no cross subsidy						2019/20		\$970		
Annual sewerage bill - with cross subsidy								\$1,001		
Required increase in annual bill								3.2%		
Existing ET at 2019/20								20,462		
Discount rate								5%		
Year	Total ET	New ET p.a.	Annual cross subsidy - developer charges	PV of annual cross-subsidy	Annual bill revenue with no cross-subsidy	Annual bill revenue with cross-subsidy	Additional amount required to cover subsidy	PV of additional amount required	Cross-subsidy by existing customers	PV of cross-subsidy
